LA CONTEUR / PARTNERSHIP BRIEF

The Last Mile *Creation Project.*

A place to learn and make, in school or out.

We want young people across Uganda to practise, play and build with tools they can use where they live. A village learning circle, a shared phone or a break in schooling should still leave room to create.

01

Start with what learners can use today.

AI Revision Hub introduces Tr. AI-sha and connects learners to past-paper practice. Fun with the Bible is a story and quiz game co-created with an eight-year-old. Both offer an entry point for young people to shape what comes next.

02

Pilot the next tools with a local group.

In development: offline coding kits for primary and secondary learners. Planned: a Community Builders Challenge where school clubs and out-of-school groups prototype solutions to local problems. Young makers can already pitch an idea.

03

Bring one thing your team does well.

Host a pilot or contribute teachers, university mentors, disability access expertise or local-language content. Funding can support shared devices, printing, facilitation and travel. A first conversation should agree the learning group, access needs, costs and who will do what.

What a pilot could tell us

Together we could track who participates, which access barriers persist, what learners make, and what they want changed. These are proposed measures for a pilot, not results to date.

Discuss a pilot or funding partnership
